## **DETAILED ACTION**

### **Examiners Amendment**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in an applicant's argument on 10/24/2008.

The application has been amended as follows:

Withdrawn claims 1 - 113 have been cancelled without prejudice.

### ***Allowable Subject Matter***

2. Claims 114 – 151 (renumbered 1 – 38) are allowed.

3. The following is a statement of reasons for the indication of allowable subject matter:

The present invention of claims 114 – 151 is directed to a method and apparatus for connecting a plurality of digital video recorders to a plurality of video transmitters via first transmission lines and for connecting the plurality of digital video recorders to a playback receiver via second transmission lines.

Independent claim 114 identifies the unique distinct feature "receiver includes an external synchronizing signal generator for synchronizing said plurality of digital recorders and a controller for generating a retrieval signal for retrieving said video signals on the basis of at least one said code and said time and date and for selecting

said display signal."

The closet prior art, Elberbaum (US 5267039) discloses a method for synchronously recording and playing back a plurality of video signals generated by a plurality of externally synchronized video transmitters in a system connecting said video transmitters to a digital recorder through a first plurality of transmission lines and further connecting said digital recorders to a playback receiver (fig 1, 12, 14, 18 and 28) but does not disclose receiver includes an external synchronizing signal generator for synchronizing said plurality of digital recorders and a controller for generating a retrieval signal for retrieving said video signals on the basis of at least one said code and said time and date and for selecting said display signal

Hence claim 114 is allowed.

Since claims 115 - 131 are dependent on claim 114, therefore they are also allowed.

Independent claim 133 identifies the unique distinct feature "receiver includes an external synchronizing signal generator feeding said synchronizing signal via one of said second transmission lines and dedicated lines to said receiving and application circuits for synchronizing each of said plurality of digital recorders and a controller for generating and feeding a retrieval signal via said second transmission lines to said digital recorders for retrieving said video signals on the basis of at least one said code and said time and date and for selecting said display signal."

The prior art disclosure mentioned above applies.

Hence claim 133 is allowed.

Since claims 134 - 151 are dependent on claim 133, therefore they are also allowed.

Therefore claims 114 – 151 are allowed over prior art.
